

SteryMed

Prosthetic Work Tracking

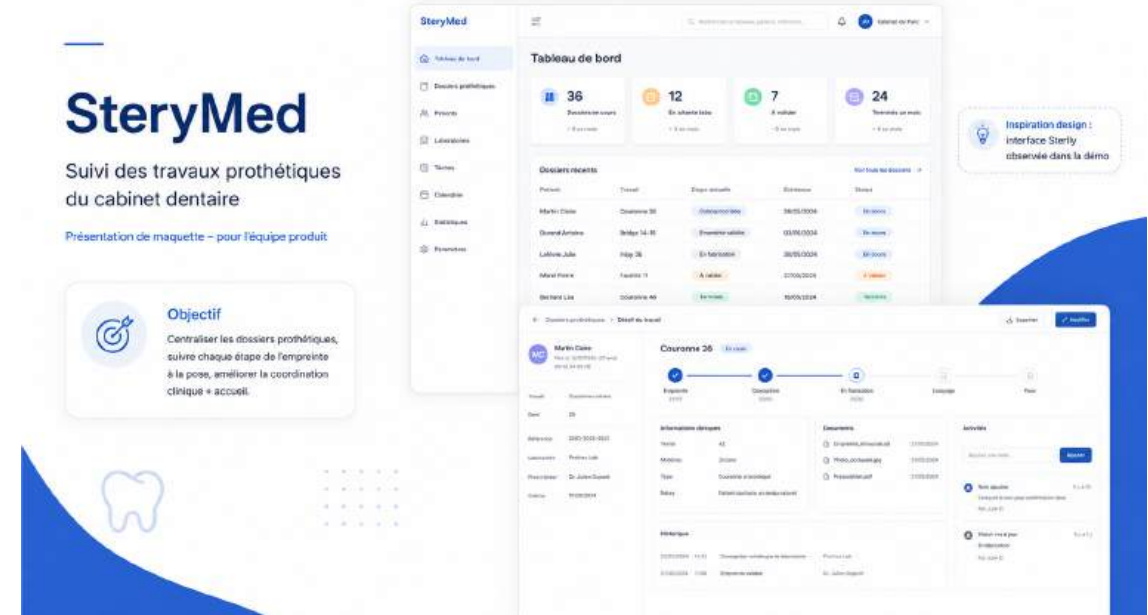

Functional mockup and implementation brief for the Web & Mobile

From dental impression to final prosthesis placement

1

Main goal

Centralize every prosthetic case, prevent forgotten tasks, provide real-time visibility, and improve coordination between the clinical team and reception.

Visual concept - interface inspired by the Sterily usability approach, adapted for SteryMed

Product direction: SteryMed

A New product name

The project name used in this document is SteryMed. The previous SteryQore name must no longer be used in UI, documentation or development tickets.

B Existing core

Keep the sterilization traceability foundation: cycles, devices, operators, labels, QR/DataMatrix, documents and audit history.

C New module

Add a dedicated Prosthetic Work Tracking module to manage dental laboratory cases from impression to placement.

Design principle

- Use the Sterily demo as a usability reference: clear navigation, large readable tables, short workflows and fast status changes.
- Do not copy Sterily pixel-for-pixel. SteryMed must have its own product identity and architecture.
- Every screen should answer one operational question in a few seconds: What is pending? What came back? What needs a reminder? What is unpaid?

Why this module is needed

Maryvale's requested business outcome

1

Centralize information

One single case must contain patient, practitioner, laboratory, clinical dates, work type, status, payment information, attachments and notes.

2

Prevent forgotten cases

The team must immediately detect prosthetic work that is delayed, returned but not scheduled, or waiting for administrative completion.

3

Improve coordination

Clinical staff and reception must share the same case status so that everyone sees the same information in real time.

4

Reduce double entry

Future integration with the practice management software should synchronize patient and appointment information when officially possible.

5

Make reception faster

Before placement, reception must be able to verify payment, deposit, remaining balance and missing information in seconds.

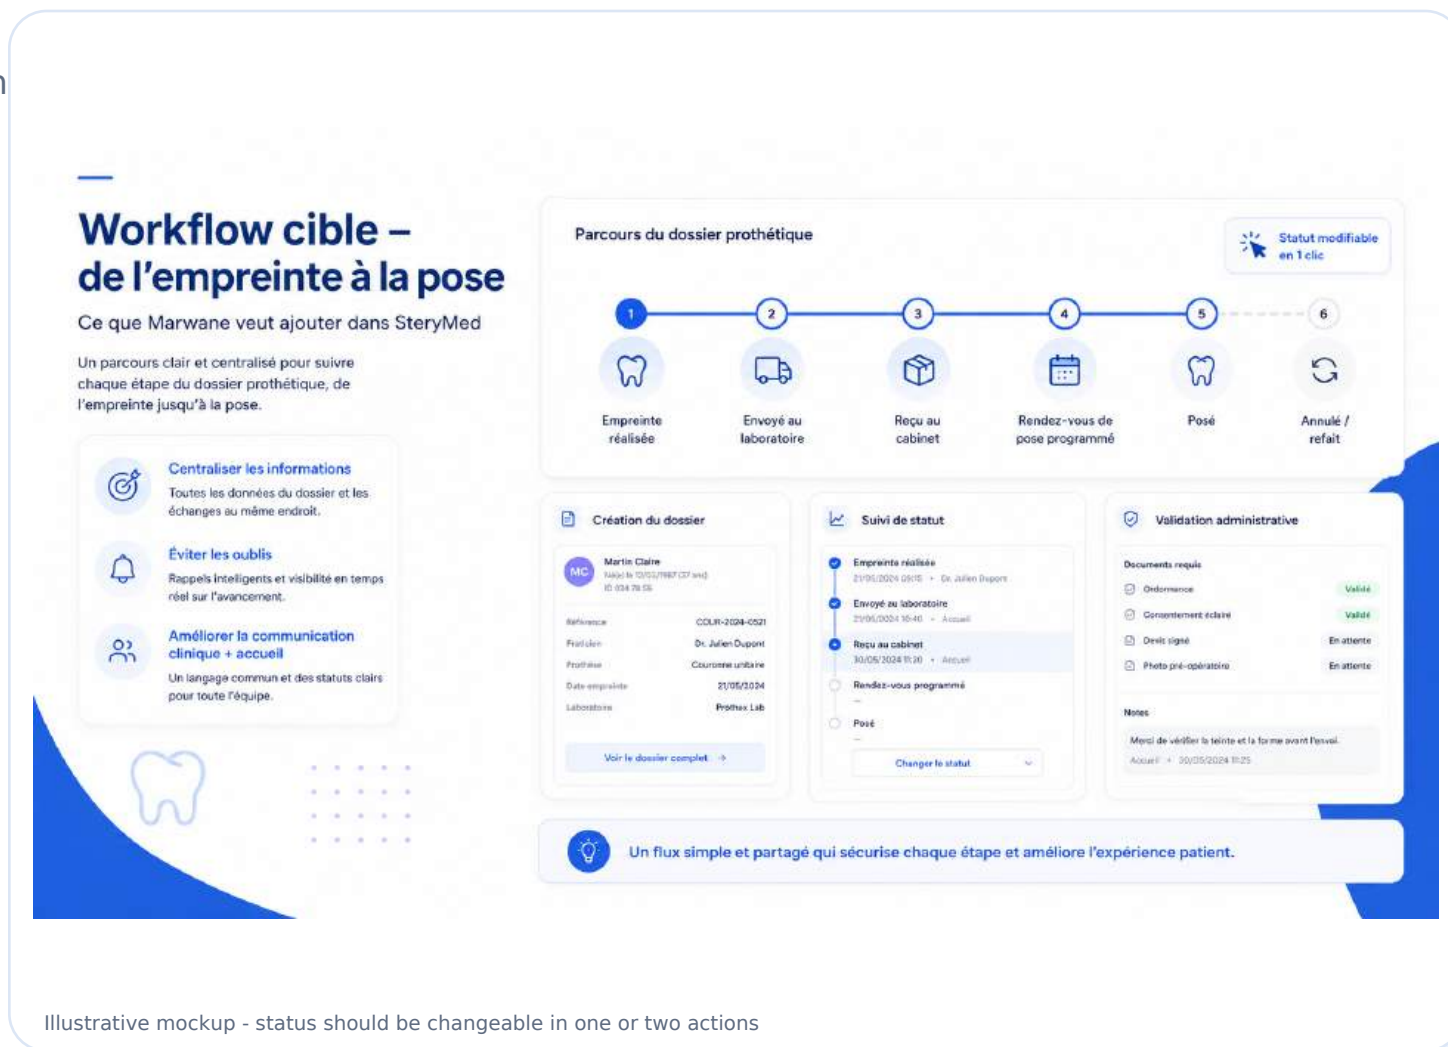

Target workflow

One simple status flow from impression to placement

Required statuses

- Impression completed
- Sent to laboratory
- Received at practice
- Placement appointment scheduled
- Placed
- Cancelled / Remade when needed

Each status change must store date, time, user and optional note in the history. This creates a reliable audit trail without slowing the team down.

Home dashboard

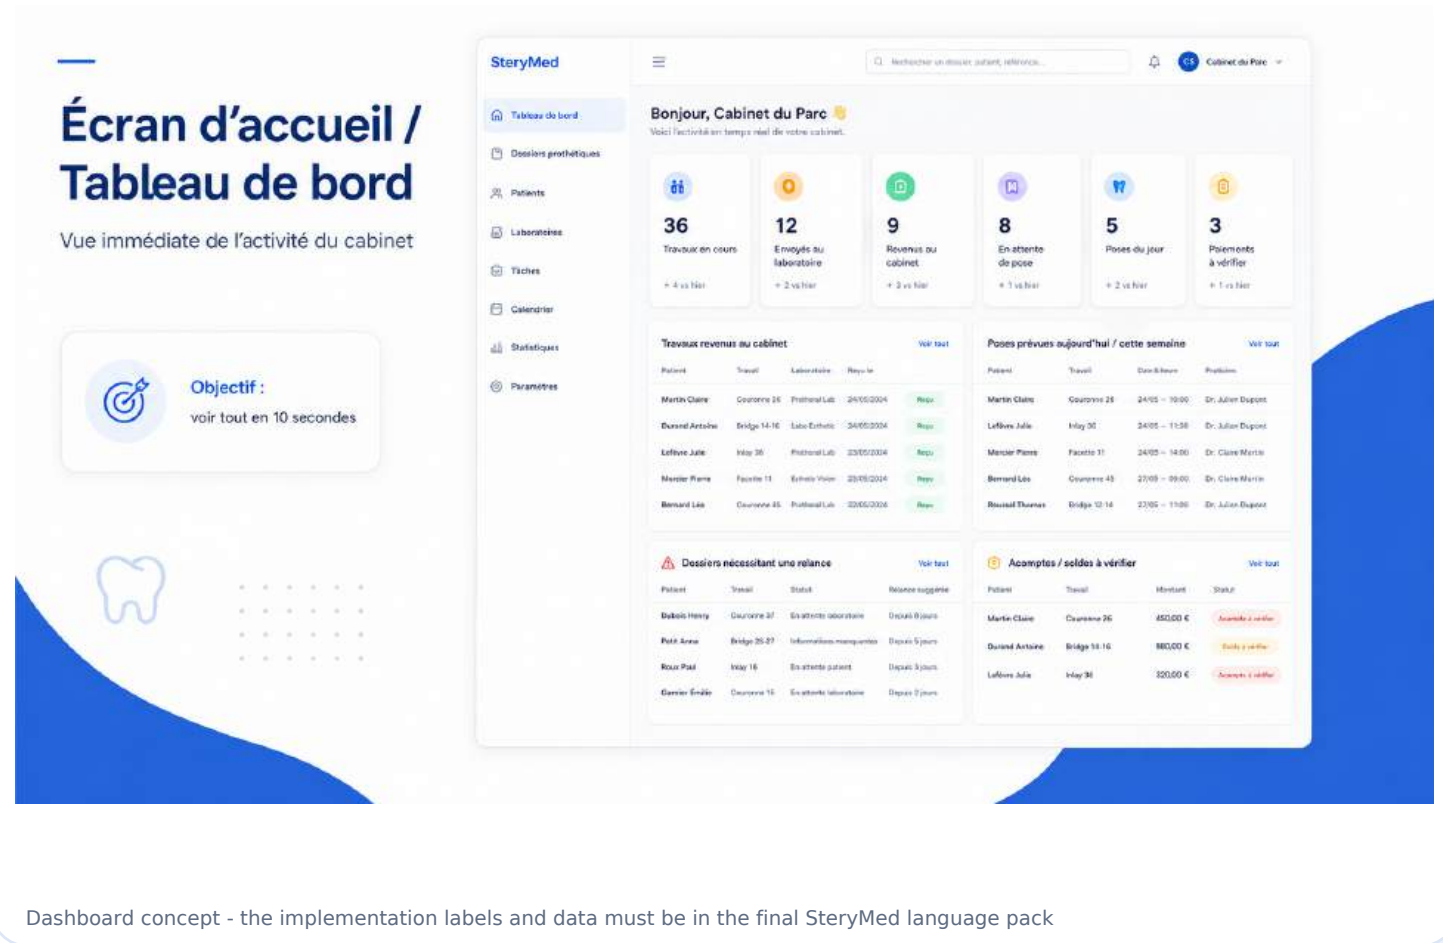

The team should understand the practice situation
Widgets required

- Active prosthetic cases
- Cases currently at the laboratory
- Cases returned to the practice
- Cases waiting for placement
- Placements scheduled today / this week
- Cases requiring a reminder
- Deposits or balances still to be paid

UX rule

Every dashboard card must open the corresponding filtered list. No dead KPI card.

Create a prosthetic case

Patient

- First name
- Last name
- Patient ID / link to patient profile

Clinical

- Practitioner
- Impression date
- Impression type: digital / physical
- Type of work: crown, bridge, implant, aligner, veneer, denture, etc.

Laboratory & dates

- Laboratory
- Sent-to-lab date
- Returned-from-lab date
- Planned placement date
- Actual placement date

Notes

- Free-text remarks
- Internal comments
- Optional priority / urgency

Creation must be quick: use searchable dropdowns, sensible defaults and prefilled dates wherever possible.

Prosthetic case details

Clinical + administrative information on one screen
The page must include

- Patient identity and practitioner
- Current status and full timeline
- Impression type and work category
- Laboratory and all important dates
- Administrative / payment block
- Attachments and clinical photos
- Remarks and internal activity history
- Quick Edit and Print / Export actions

The image shows a mockup of a 'Fiche dossier prothétique' (Prosthetic Case File) interface. It is divided into several sections:

- Header:** 'Fiche dossier prothétique' with a subtitle 'Toutes les informations cliniques + administratives en un seul écran'. A callout box says 'L'accueil vérifie rapidement si le dossier est complet avant la pose' (The receptionist checks quickly if the file is complete before the fitting).
- Patient & Practitioner Info:** Patient: Martin Claire, Né le 12/04/1988 (36 ans), ID Patient: PT-0001245. Practitioner: Dr. Julien Dupont, Chirurgien-dentiste.
- Status & Timeline:** 'Statut actuel: En laboratoire'. A progress bar shows: Prise d'empreinte (green), Dossier complet (green), En laboratoire (blue), Prêt pour validation (grey), Validé (grey), Post (grey).
- Informations cliniques:**
 - Date d'empreinte: 20/05/2024
 - Type d'empreinte: Numérique
 - Nature du travail: Couronne
 - Laboratoire: Labodent Pro
 - Date d'envoi au laboratoire: 22/05/2024
 - Date de retour prévue: 05/06/2024
 - Date de pose prévue: 12/06/2024
 - Date de pose réalisée: -
 - Remarques: Couronne céramo-métallique sur 16. Teinte A2. Transmise par empreinte numérique 3Shape.
- Informations administratives:**
 - Accompte demandé: Oui
 - Accompte reçu: Oui
 - Montant de l'acompte: 200,00 €
 - Paiement final effectué: Non
 - Solde restant à régler: 580,00 €
 - Commentaires: Paiement final à la pose.
- Documents:** A section for uploading documents, showing thumbnails for 'Photo intra-oral', 'Bon labo', and 'Prescription'.

Illustrative case detail - final SteryMed fields should follow this brief

Administrative tracking

Reception must know that the case is financially complete before placing it

Deposit requested

Yes / No

Deposit received

Yes / No

Deposit amount

Currency amount

Final payment completed

Yes / No

Remaining balance

Calculated / entered amount

Administrative comments

Free text

Recommended system behavior

- Remaining balance should be automatically recalculated when amounts change.
- Before “Placed” status, display a non-blocking warning if an expected payment is still outstanding.
- Permissions: financial fields may be editable by reception/authorized roles while remaining visible to clinicians as needed.

Waiting for Placement

Priority view specifically requested by Marwane
Automatic inclusion rule

Returned-from-lab date exists AND Actual placement date is empty AND status is not Cancelled.

For every row show

- Patient and practitioner
- Laboratory and work type
- Return date and planned placement date
- Days elapsed since laboratory return
- Current status

Priority logic

Use visual aging levels such as 0-7 days, 8-14 days and 15+ days. Thresholds should be configurable later.

Vue essentielle – Travaux en attente de pose

Fonction prioritaire demandée par Marwane

Cet écran centralise tous les travaux prothétiques retournés du laboratoire mais qui n'ont pas encore été posés.

- ✓ Suivi clair des retours labo
- ✓ Priorisation selon ancienneté
- ✓ Moins d'oublis, plus de réactivité

Cet écran permet d'éviter les oublis, de relancer les patients à temps et d'assurer la continuité des soins sans retard.

Travaux en attente de pose
 Travaux retournés du laboratoire et non encore posés

Exporter

Patient	Praticien	Laboratoire	Nature du travail	Statut	Période
Tous	Tous	Tous	Tous	Tous	30 derniers jours

Patient	Travail	Laboratoire	Date retour labo	Date prévue de pose	Jours écoulés	Statut	Action
MC Martin Claire Né le 12/03/1968	Couronne céramo-métallique 26	Prothet Lab	24/05/2024	28/05/2024	2 jours	A planifier	
BA Bernard Alain Né le 05/07/1968	Bridge 14+ 36	Lab Dent+	21/05/2024	24/05/2024	5 jours	Relance conseillée	
LE Lefèvre Julie Né le 18/11/1993	Inlay onlay céramique 36	Ceram Lab	13/05/2024	15/05/2024	12 jours	En attente	
DA Durand Antoine Né le 22/01/1978	Prothèse complaine maxillaire	Prothet Lab	04/05/2024	06/05/2024	21 jours	Urgent	

4 travaux

0-7 jours 8-14 jours 15 jours et +

Illustrative priority screen

Search and filters

Users must reach the right case without navigating multiple screens

1

Patient

Searchable / combinable filter

2

Practitioner

Searchable / combinable filter

3

Laboratory

Searchable / combinable filter

4

Type of work

Searchable / combinable filter

5

Status

Searchable / combinable filter

6

Date period

Searchable / combinable filter

Important: filters must work together and persist while the user opens a case and returns to the list.

Example: Practitioner = Dr Martin + Laboratory = Lab A + Status = Returned + Last 30 days

Post-MVP roadmap

Build the data model now so these features can be added without redesigning the product

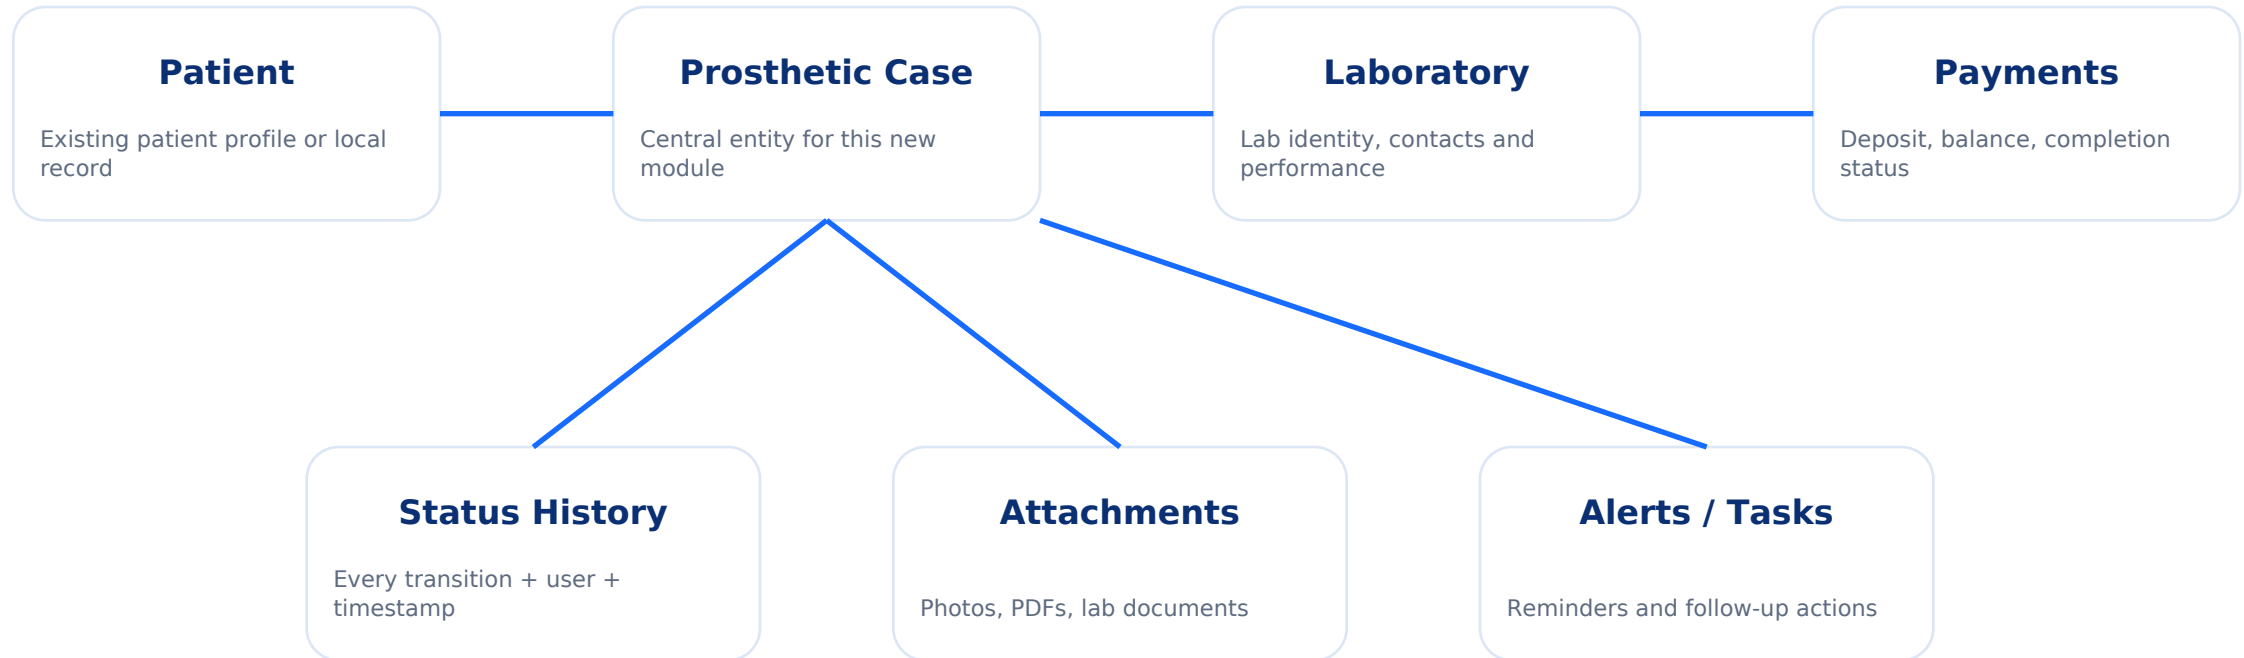

Planned extensions

- Attachments: photos, laboratory slips, prescriptions and PDFs.
- Automatic alerts: cases waiting beyond a configurable delay.
- Statistics: number of cases, average turnaround time, performance by laboratory or practitioner.
- Practice software integration: reduce duplicate entry by synchronizing patient / appointment information through official methods.
- Mobile optimization: fast case consultation, photos and status updates from chairside.

Recommended functional architecture

Keep the prosthetic workflow independent but connected to the existing SteryMed core

Recommended backend rule: all important updates must be auditable and linked to the authenticated user who made the change.

Anas - Web / Backend responsibilities

Backend deliverables

- Create the prosthetic case domain model and database migrations.
- Implement role-based permissions for clinical and reception users.
- Create REST endpoints for cases, filters, status transitions, payments, attachments, laboratories and dashboard counts.
- Enforce status transition rules and write immutable history records.
- Compute “days waiting for placement” on the server or through a reliable query.
- Generate dashboard aggregates with efficient indexed queries.
- Implement secure file storage for photos/PDFs and metadata.
- Prepare integration adapters so patient/practice software connectors can be added later without changing the core model.

Suggested API surface

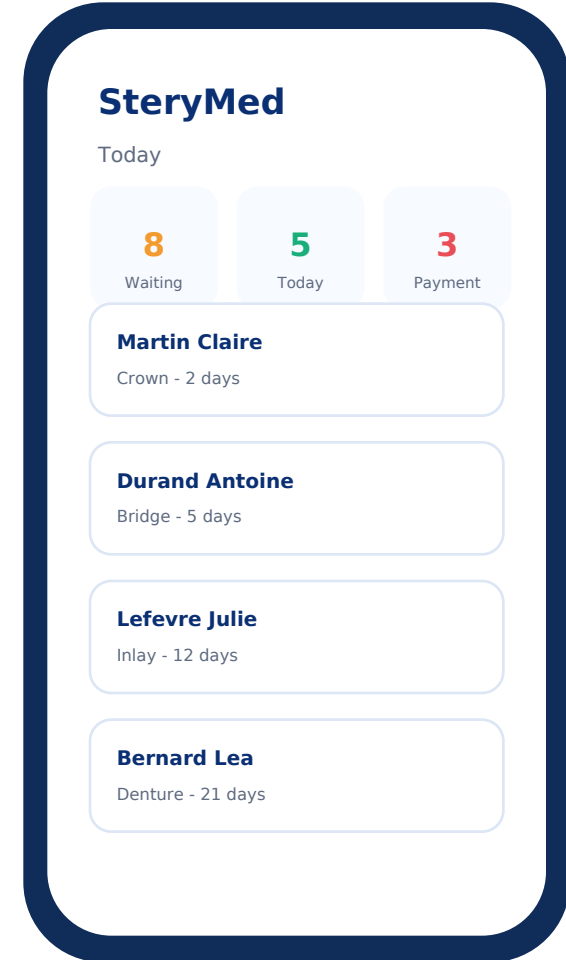

- MVP API examples
- GET /prosthetic-cases
- POST /prosthetic-cases
- GET /prosthetic-cases/{id}
- PATCH /prosthetic-cases/{id}
- POST /prosthetic-cases/{id}/status
- POST /prosthetic-cases/{id}/attachments
- GET /prosthetic-cases/waiting-placement
- GET /prosthetic-dashboard
- GET /laboratories

Never expose raw secrets, patient data or unrestricted file URLs. Apply **Non-negotiable** authorization and audit logging.

Meryem - Mobile responsibilities

Mobile deliverables

- Home: compact summary of active, returned, waiting and today's placement cases.
- Case list: search + filters optimized for one-handed use.
- Case detail: timeline, clinical data, laboratory, dates, payment readout and notes.
- Quick status change: one tap to open the status action, confirmation before critical transitions.
- Attachments: capture a photo, select a file, upload with progress and clear error state.
- Waiting for Placement: dedicated mobile list showing days elapsed and urgency.
- Notifications later: deep-link directly to the case requiring action.
- Offline tolerance: at minimum preserve form content during temporary connectivity loss; avoid silent data loss.

MVP acceptance criteria

Create

A user can create a complete prosthetic case in under 2 minutes.

Track

The current status and all previous transitions are always visible.

Find

Any case can be found using patient, practitioner, lab, work type, status or period.

Wait

Returned cases not yet placed automatically appear in Waiting for Placement with correct elapsed days.

Admin

Reception can verify deposit, balance and payment completion from the case page.

Dashboard

Dashboard counts open the correct pre-filtered cases.

Audit

Every important modification records user, timestamp and previous/new state.

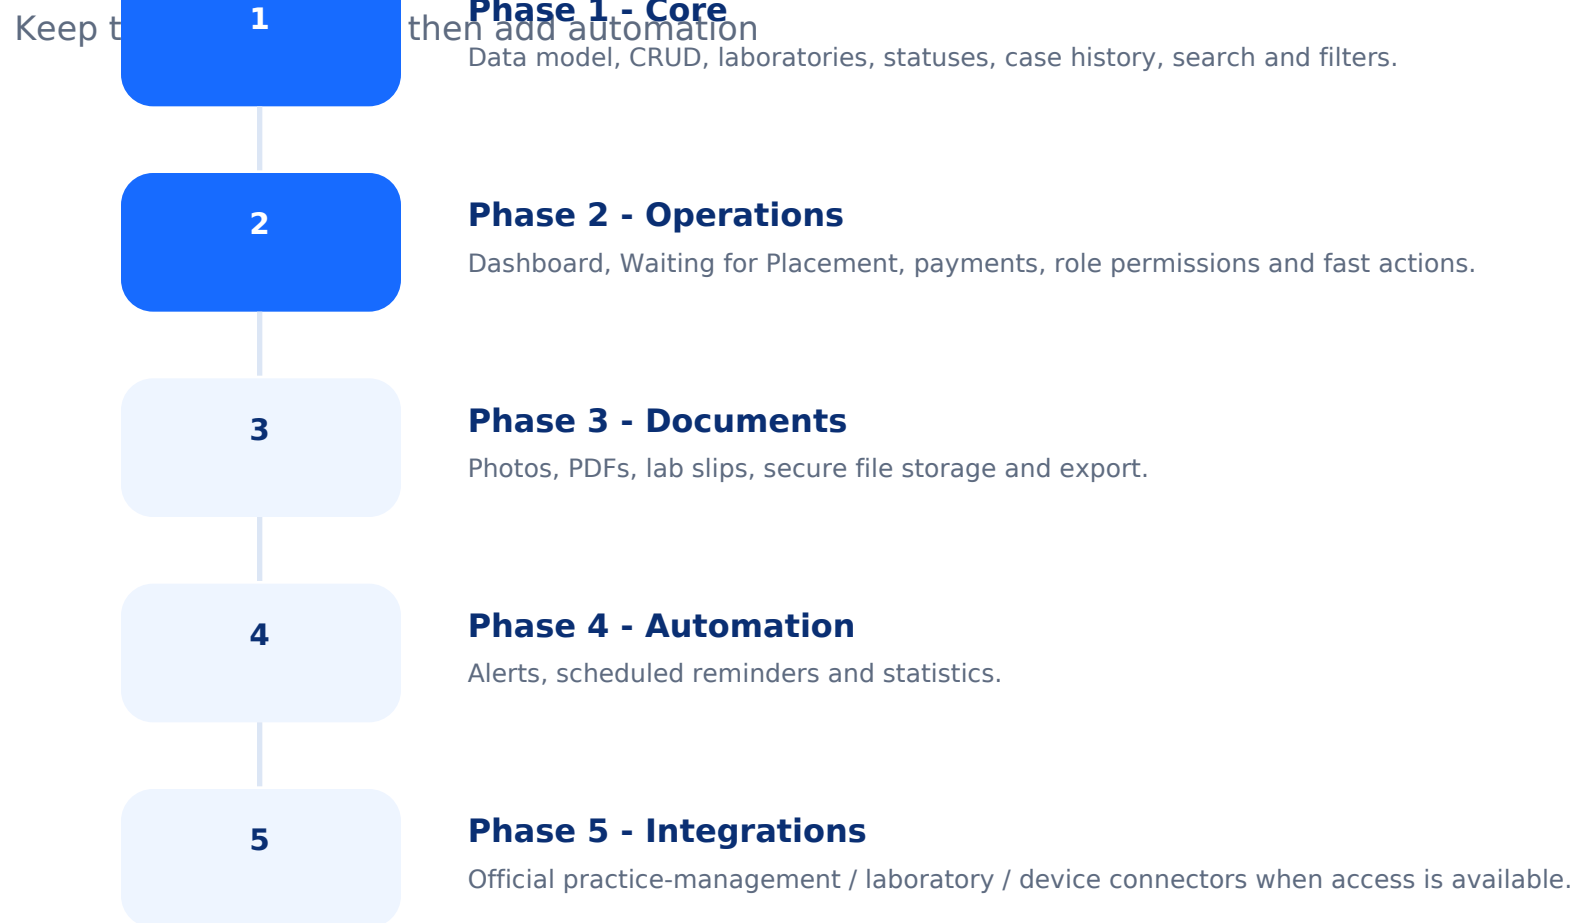

Responsive

Web works on desktop/tablet; mobile app handles quick consultation and updates.

Secure

Permissions and file access prevent unauthorized exposure of patient information.

Recommended implementation order

Priority: simple, fast, reliable and understandable by the whole dental team.
